Startup Idea Validator

AI-powered startup critique agent · Track 1 · ADK + Cloud Run

PARTICIPANT	TRACK	STACK
Priyanka P	**Track 1 — Build & Deploy AI Agents**	**ADK · Gemini · Cloud Run**

OVERVIEW

What it does

The **Startup Idea Validator** is an AI agent that takes a startup idea as natural language input and returns a structured, honest critique. Built on Google ADK and Gemini, it covers market potential, competitive landscape, unique angles, key risks, and a scored verdict — deployed as a publicly accessible service on Cloud Run.

→ Input User describes their startup idea in plain English via the chat interface.	**■ Processing** Gemini analyses the idea against market, competition, and risk factors.
■ Output Structured critique: Market · Competition · USP · Risks · Score /10.	**■ Deployment** Serverless Cloud Run — HTTPS endpoint with ADK dev-ui for live chat.

TECHNOLOGY

Stack

Google ADK	Agent framework — tool use, session management, LLM orchestration
Gemini 2.5 Flash	Core LLM via Vertex AI — powers the startup critique logic
Google Cloud Run	Serverless container hosting — auto-scaling HTTPS endpoint
Docker	Auto-generated Dockerfile via ADK CLI deployment pipeline
Python 3.12	Agent logic, tool definitions, environment configuration

COMPLIANCE

Build Criteria Met

✓	Implemented using Google ADK
✓	Uses a Gemini model for inference
✓	Performs one clearly defined task — startup idea critique
✓	Accepts input request and returns a structured response
✓	Callable via HTTP endpoint on Cloud Run
✓	Returns valid, formatted response for any given idea

DEPLOYMENT

Live on Cloud Run

CLOUD RUN URL

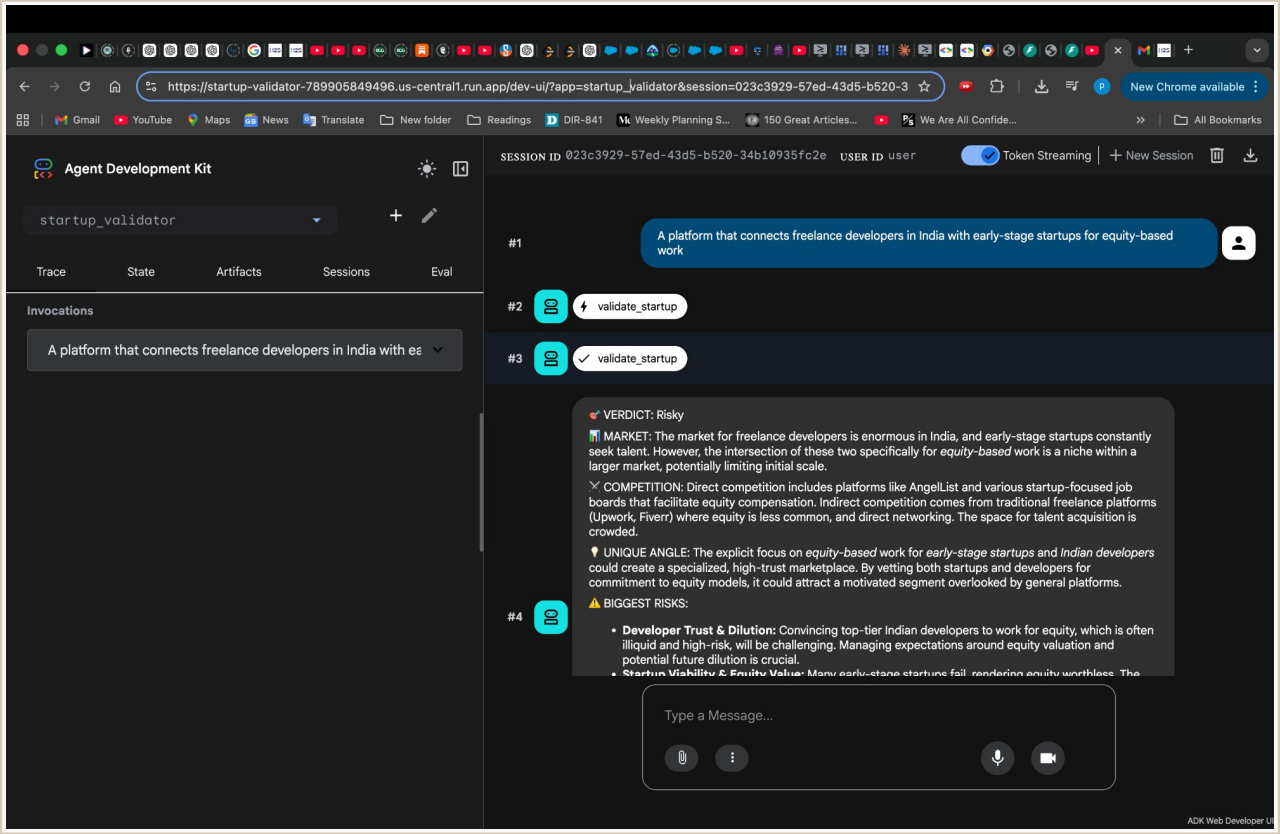
https://startup-validator-789905849496.us-central1.run.app

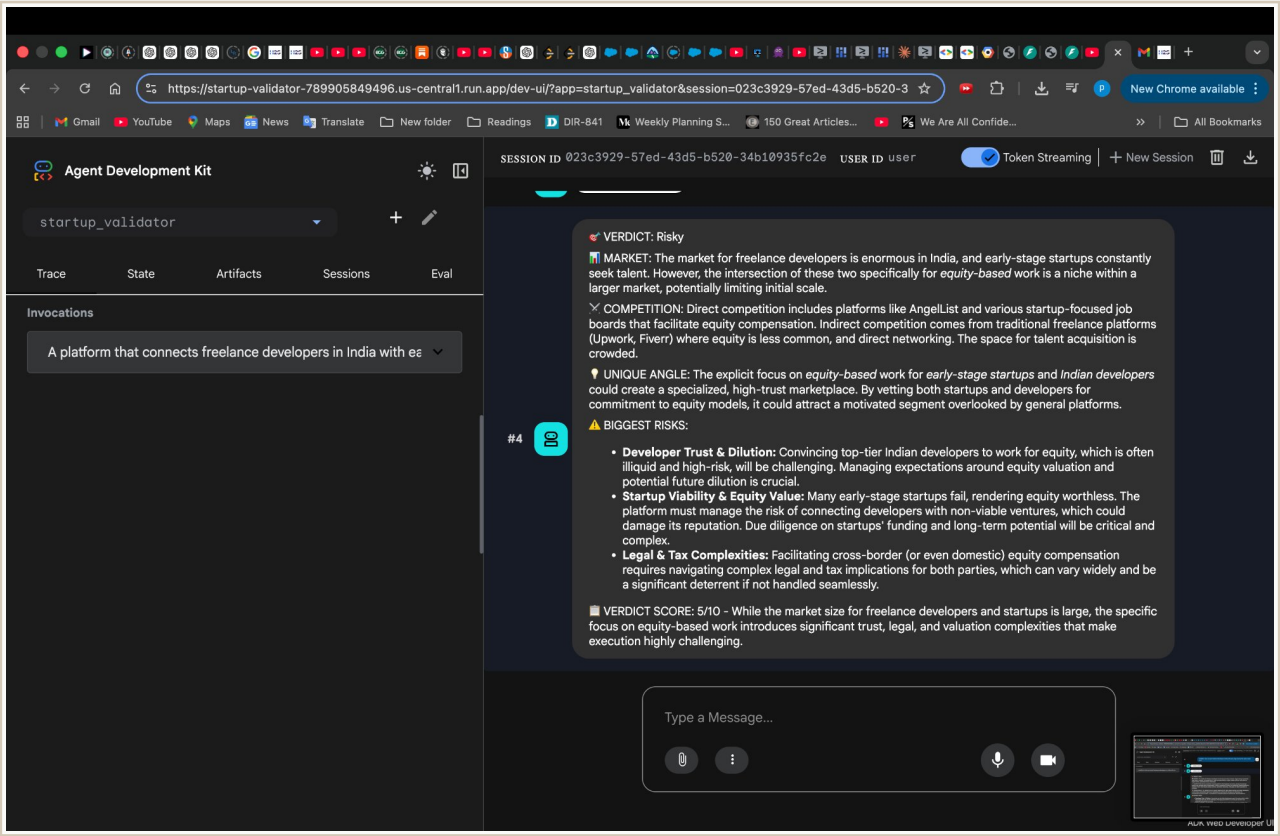
Append /dev-ui for the chat interface · Append /docs for the API explorer

PROTOTYPE

Agent in Action

Live output from the deployed agent at startup-validator-789905849496.us-central1.run.app/dev-ui





The agent correctly identifies verdict, market opportunity, competition, unique angles, risks, and scores the idea out of 10.
